

Template

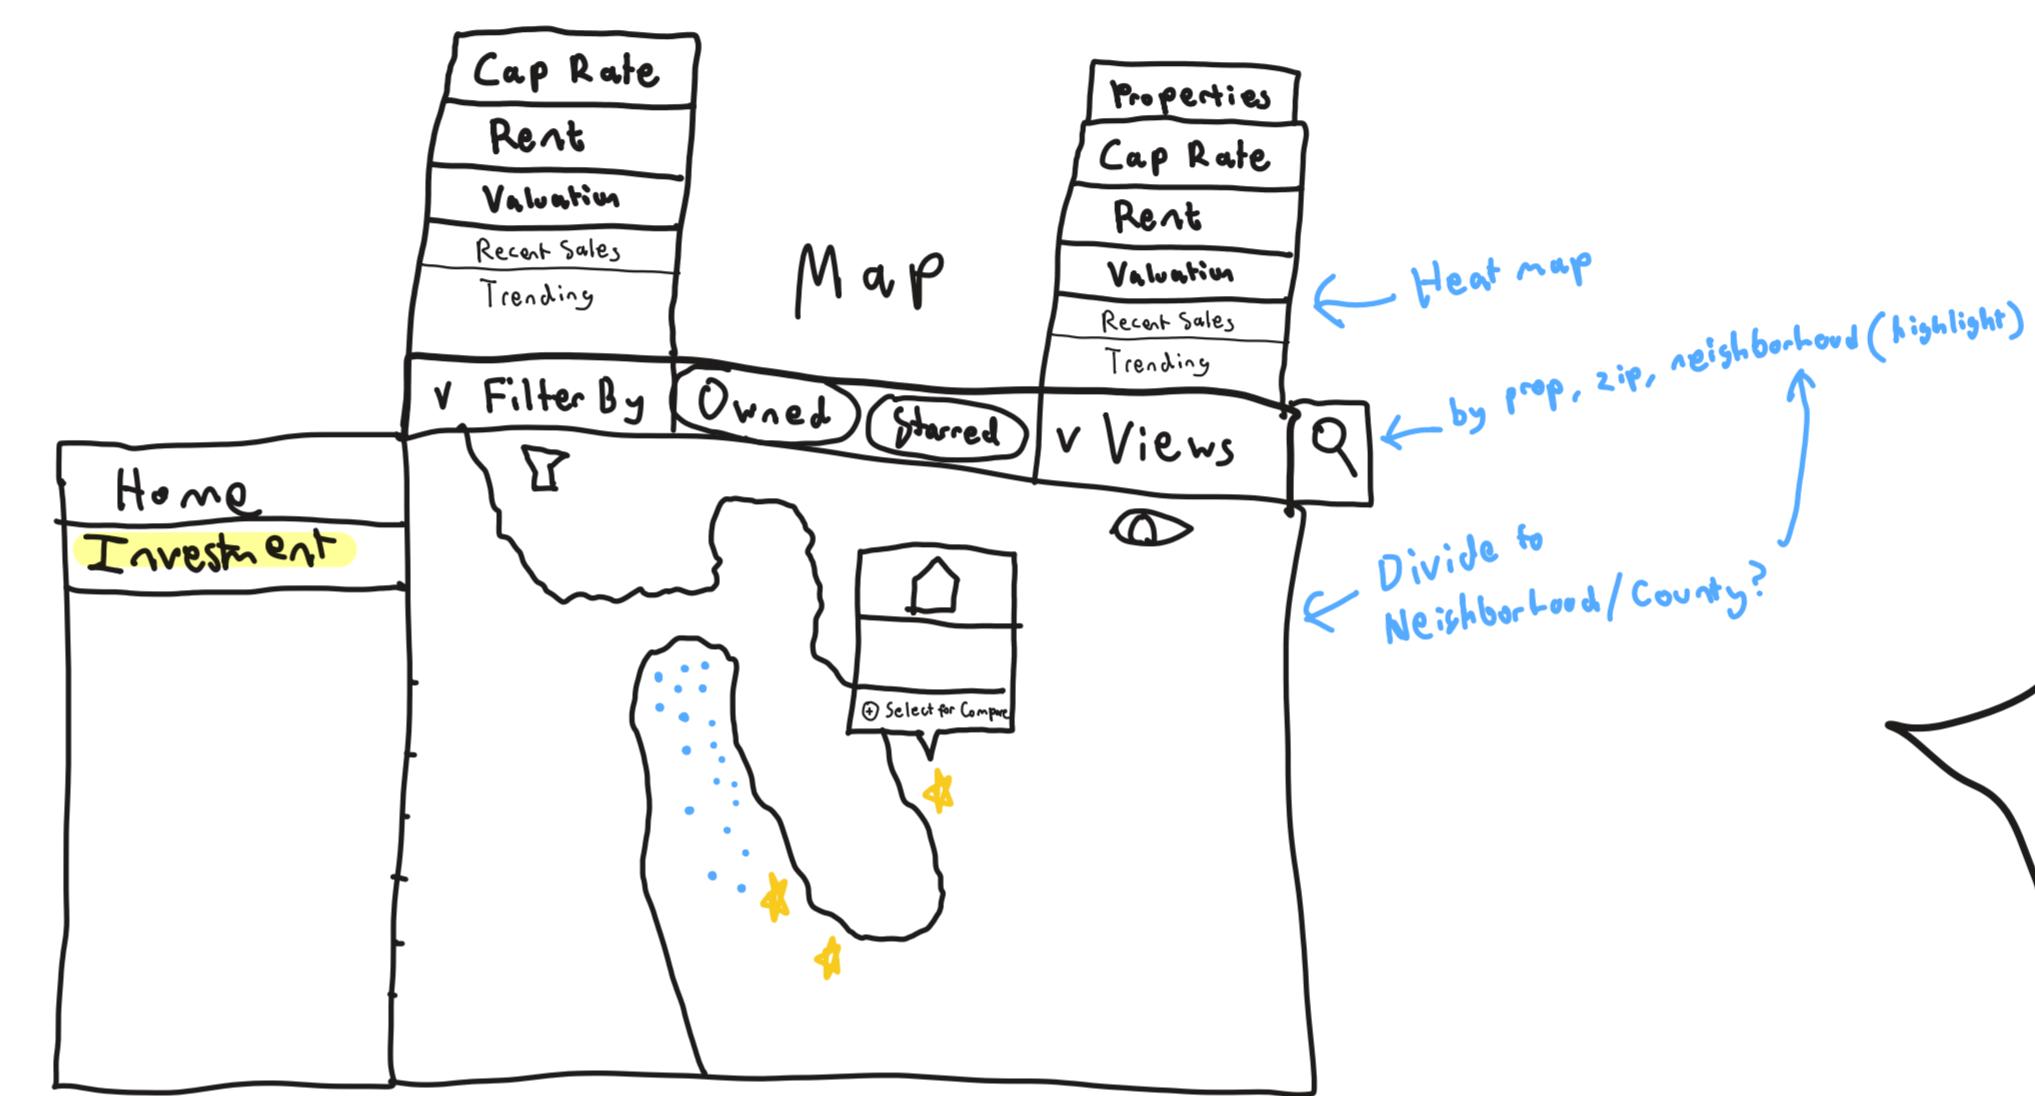

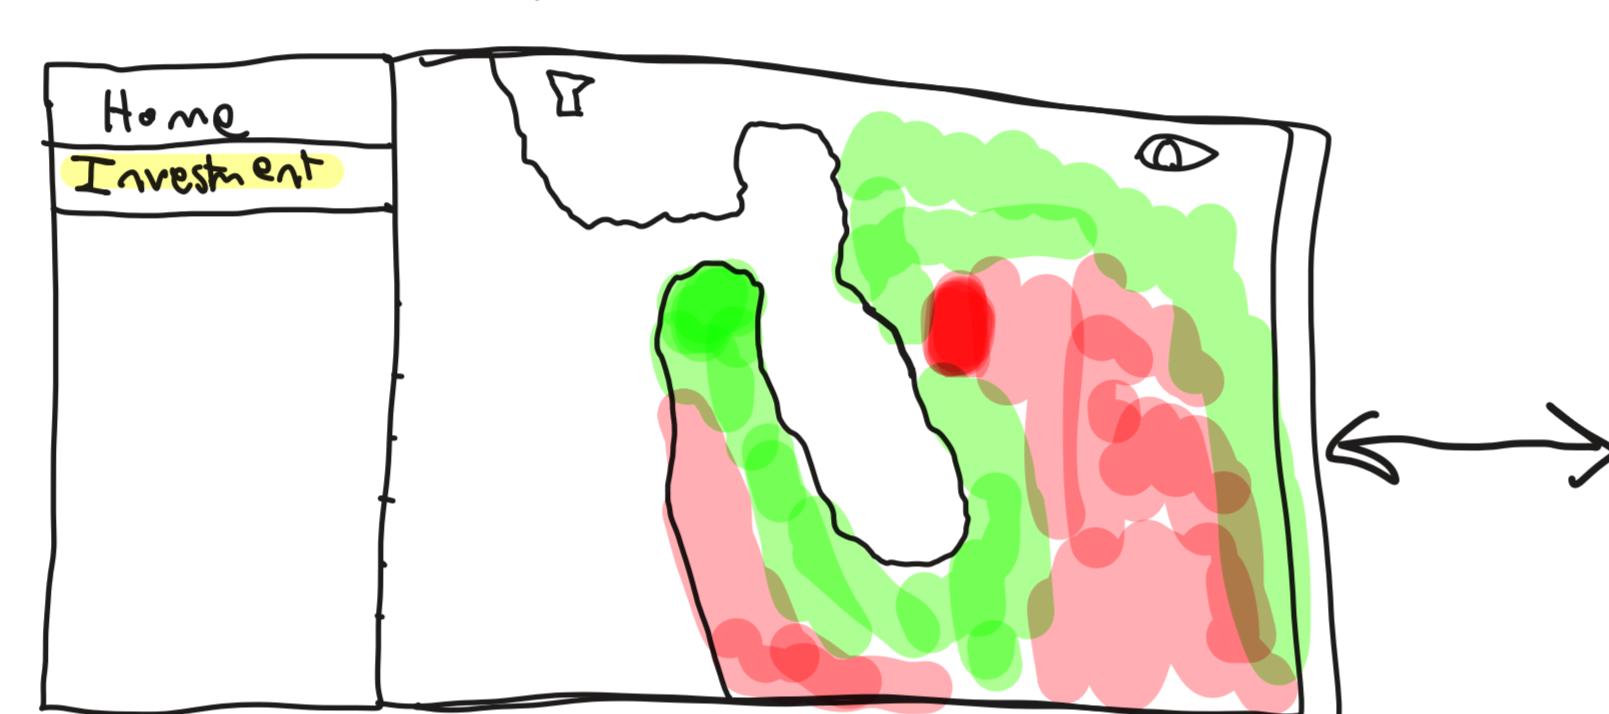

Think like interactive dashboards, like Magic Eye. Look at Tableau or Retool or mode analytics for inspiration.

Trends

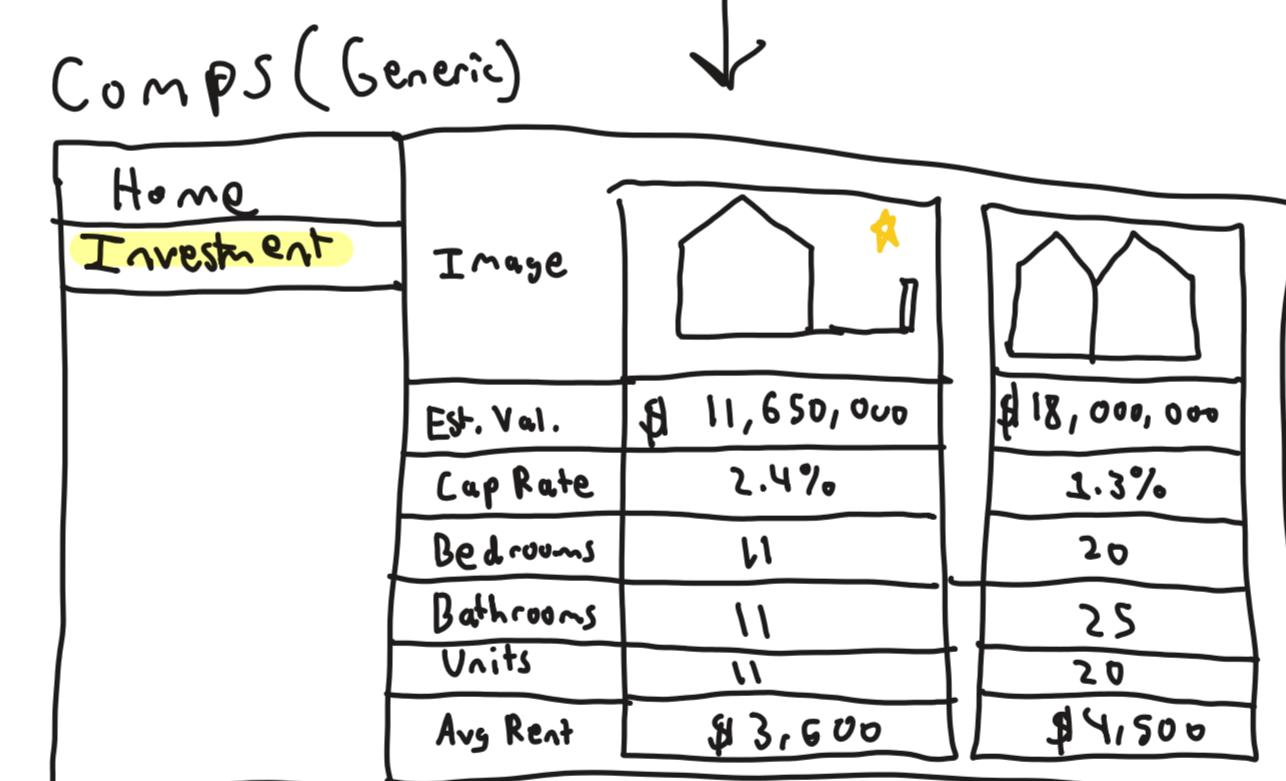

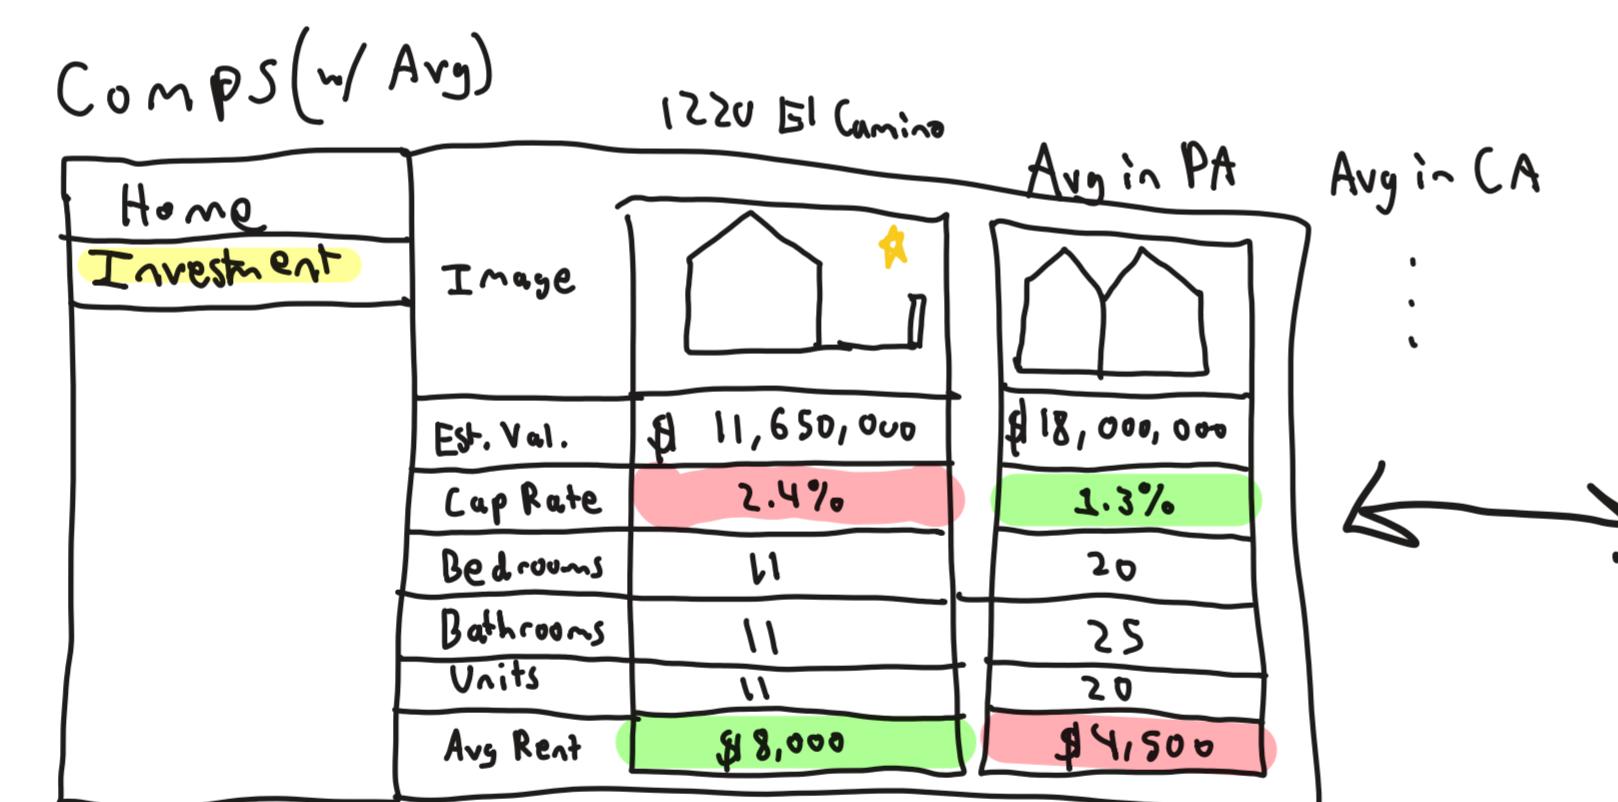

Should this be a layer on top of Mapbox Studio or done within Mapbox Studio?

Experiment with the chat box below, like ChatGPT or AI mode.

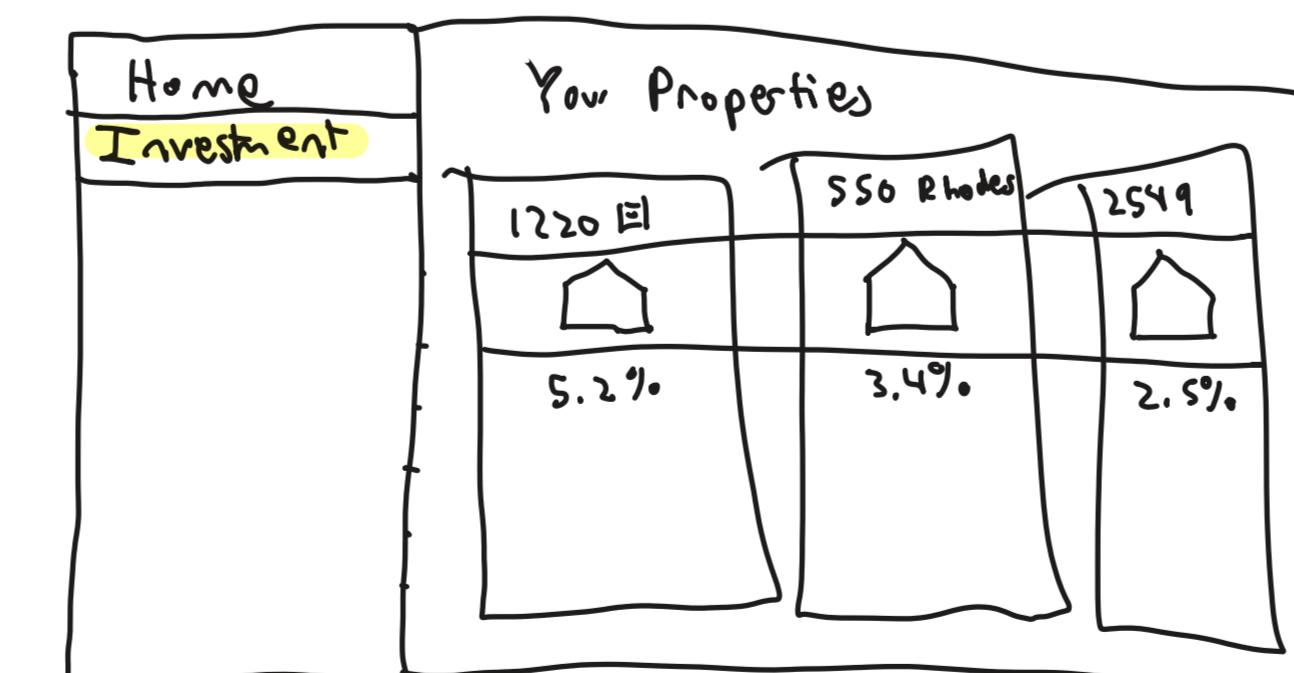

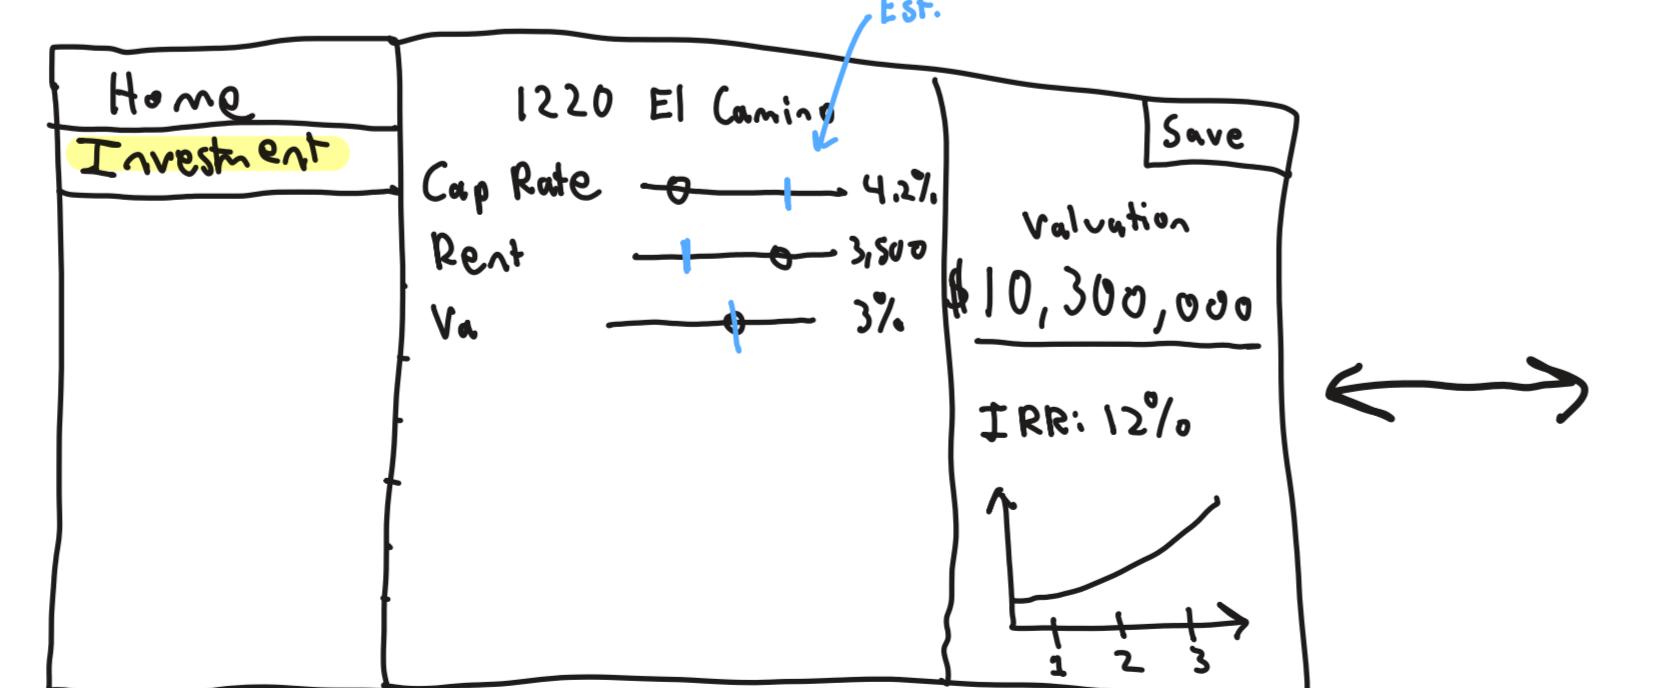

In a given map view, we also want the option to see tables. I'm considering whether the table views should be completely separate or integrated. If they're integrated, we can take inspiration from Shopify, which puts them at the bottom. Alternatively, we could have a link to see the dashboards for the page, and that will go to a separate page.

How separate should the Trends view (where you can see analytics) and the Map view (where you can see individual properties information) be? I think they should be integrated. Maybe separate views else it will get cluttered.

Can select multiple properties for comparison.
